

Document Name:	Register Description Working Group Release Notes 1.0.3
SystemRDL Version:	1.0
Date of Issue:	May 11 <sup>th</sup> 2009
Author:	SPIRIT Register Description Working Group Membership
Purpose:	Provide a description of the SystemRDL 1.0 Package

Announcement Text:

In May 2009, The SPIRIT Consortium announced the release of the SystemRDL specification. SystemRDL is a language for the design and delivery of registers to be used in IP blocks within electronic designs.

The SystemRDL semantics support the entire life-cycle of registers from specification, model generation, and design verification to maintenance and documentation. Registers are not just limited to traditional configuration registers, but can also refer to register arrays and memories. The SystemRDL language has been designed to increase productivity, quality, and reuse during the design and development of complex digital systems. It can and has been used to share IP within and between groups, companies, and consortiums.

This is accomplished by specifying a single source for the register description from which all views, software, hardware and documentation, can be automatically generated, which ensures consistency between multiple views. A view is any output generated from the SystemRDL description, e.g., RTL code or documentation. These views include the production of IP-XACT descriptions. SystemRDL is used by many teams to tersely capture a human readable and writable description from which the rest of the deliverables are produced.

*"The SPIRIT Consortium would like to gratefully acknowledge the Contribution of SystemRDL to The Consortium by Denali. This contribution provides the industry with a language to comprehensively describe registers and has extended the IP-XACT register descriptions extensively thereby also extending the uses of the IP-XACT standard into many practicable design areas,"* says Ralph von Vignau, president of The Consortium. *"SystemRDL together with the next release of IP-XACT v1.5 will provide the industry with a welcome design environment to manage and create registers in complex designs."*

# **1 ABOUT THIS DOCUMENT**

## **1.1 Purpose of this Document**

This document acts as a guide to the release bundle.

This document provides information for users to adopt the specification against their own design flows, tools and Intellectual Property (IP).

## **1.2 Access and license to material in document**

This work forms part of The SPIRIT Consortium's SystemRDL specification.

Use of these materials are governed by the legal terms and conditions outlined in the disclaimer available from [www.spiritconsortium.org](http://www.spiritconsortium.org)

## **1.3 Statement of use of SPIRIT Consortium Specifications**

The SPIRIT Consortium Specification documents are developed within The SPIRIT Consortium and the Technical Working Groups of The SPIRIT Consortium, Inc. The SPIRIT Consortium develops its specifications through a consensus development process, approved by its members and board of directors. This brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers serve without compensation from The SPIRIT Consortium. While The SPIRIT Consortium administers the process and establishes rules to promote fairness in the consensus development process, The SPIRIT Consortium does not independently evaluate, test, or verify the accuracy of any of the information contained in its specifications.

This document is an authorized and approved publication of The SPIRIT Consortium Inc. The specifications contained herein are the exclusive property of The SPIRIT Consortium Inc. And may only be utilized, copied or implemented in accordance with the terms of The SPIRIT Consortium Inc.'s download agreement. For details contact The SPIRIT Consortium, Inc via their website [www.spiritconsortium.org](http://www.spiritconsortium.org) or write to them at 1370 Trancas Street #184, Napa, CA 94558 USA.

Compliance with this document may require use of one or more features covered by patent rights or other intellectual property rights of a consortium member or third party. No position is taken by the members of The SPIRIT Consortium Inc. with respect to the validity or infringement of any patent, copyright or other intellectual property right, whether owned by a member of The Consortium or otherwise. The members of The SPIRIT Consortium Inc. hereby expressly disclaim any liability for infringement of intellectual property rights of others by virtue of The Consortium specifications, nor do the members to The Consortium undertake a duty to advise users or potential users of The Consortium specifications of such notices or allegations. The SPIRIT Consortium Inc. hereby expressly advises all users or potential users of this document to investigate and analyze any potential infringement situation, seek the advice of intellectual property counsel and, if indicated, obtain a license under any applicable intellectual property right or take the necessary steps to avoid infringement of any intellectual property right. The SPIRIT Consortium Inc. expressly disclaims any intent to promote infringement of any intellectual property right by virtue of the evolution, adoption, or publication of The SPIRIT Consortium Inc. specifications.

The SPIRIT Consortium Inc. makes no representation or warranty regarding any specification, and any company using a specification shall do so at its sole risk, including specifically the risks that a product developed will not be compatible with any other product or that any particular performance will not be achieved. The SPIRIT Consortium Inc. shall not be liable for any direct, indirect, special, punitive, exemplary, incidental, proximate or consequential damages or expenses arising from the use or implementation of The SPIRIT Consortium Inc. specifications. The SPIRIT Consortium Inc.

specifications define only one approach to compatibility, and other approaches may be available in the industry.”

The existence of a Spirit Consortium Specification does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of a Spirit Consortium Specification. Furthermore, the viewpoint expressed at the time a specification is approved and issued is subject to change due to developments in the state of the art and comments received from users of the specification. Every Spirit Consortium Specification is subject to review for revision and update. Users are cautioned to check to determine that they have the latest edition of any Spirit Consortium Specification.

In publishing and making this document available, The SPIRIT Consortium is not suggesting or rendering professional or other services for, or on behalf of, any person or entity. Nor is The SPIRIT Consortium undertaking to perform any duty owed by any other person or entity to another.

Any person utilizing this, and any other Spirit Consortium Specification or document, should rely upon the advice of a competent professional in determining the exercise of reasonable care in any given circumstances.

**Interpretations:** Occasionally questions may arise regarding the meaning of portions of specifications as they relate to specific applications. When the need for interpretations is brought to the attention of The SPIRIT Consortium, The SPIRIT Consortium will initiate action to prepare appropriate responses. Since The SPIRIT Consortium Specifications represent a consensus of concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason, The SPIRIT Consortium and the members of its Technical Committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration.

Comments for revision of Spirit Consortium Specifications are welcome from any interested party, regardless of membership affiliation with The SPIRIT Consortium. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Comments on specifications and requests for interpretations should be addressed to:

Note: Attention is called to the possibility that implementation of this specification may require use of subject matter covered by patent rights. By publication of this specification, no position is taken with respect to the existence or validity of any patent rights in connection therewith.

The SPIRIT Consortium shall not be responsible for identifying patents for which a license may be required by a Spirit Consortium specification or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

The SPIRIT Consortium is the sole entity that may authorize the use of The SPIRIT Consortium-owned certification marks and/or trademarks to indicate compliance with the materials set forth herein.

## 2 BACKGROUND ON THE REGISTER DESCRIPTION WORKING GROUP

The Register Description Working Group (RDWG) was chartered by the SPIRIT Board of Directors to do the following:

1. Produce a specification for a register description language based on the work of the SystemRDL Alliance, whose language efforts were donated to the SPIRIT Consortium.
2. Validate the specification with at least two reference implementations
3. Produce recommendations for IP-XACT schema changes required to capture the additional semantic information that can be expressed in the register description language standard.
4. Produce a converter from the register description language standard to IP-XACT.
5. Validate the converter.

To date, the work of the RDWG has been to review, augment, and update the original SystemRDL language definition (called SystemRDL in this bundle for historical reasons), and to create a proposed mapping from each SystemRDL language construct to IP-XACT. There are cases in which there is no current mapping to IP-XACT. In this case, and after discussion with the SPIRIT Technical Director, we have taken the liberty to propose an IP-XACT extension to all the information to be described. The RDWG realizes that the proposed extensions may not be approved, or even the best way to proceed, but it was a vehicle to allow us to make forward progress in parallel with resolving the mappings.

The 1.0 release is intended to drive the discussion of how many and what extensions should be made to IP-XACT to capture the extra information included in the SystemRDL language standard.

## 3 CONTENTS OF THE 1.0 RELEASE

### 3.1 Contents of the Bundle

If you are reading this file, then it is likely that you have successfully unpacked the bundle. If not, you may want to get the latest version of the bundle at:

<http://www.spiritconsortium.org/releases/systemRDL/1.0/>

The structure of the bundle is as follows:

- SystemRDL\_1.0
  - Docs – Documentation directory
    - SystemRDL\_1.0\_Standard.pdf – The SystemRDL language standard.
    - SystemRDL\_Release\_Notes\_1.0.pdf – The document that you are reading.
    - SystemRDL.ico – An icon file that can be used to indicate file type. 
    - SystemRDL.png – A graphic of SystemRDL used on the front cover of this set of notes: 
  - Examples – Examples of SystemRDL descriptions and the mapping to IP-XACT.
    - generic\_rdl – This example demonstrates a large number of SystemRDL constructs and their mapping into IP-XACT.

-  `generic_example.rdl` – the input SystemRDL
-  `generic_example.xml` – the output IP-XACT
- `hier_intrpt` – This example demonstrates the SystemRDL capabilities for describing interrupt registers.
  -  `interrupt.rdl` – the input SystemRDL
  -  `interrupt.xml` – the output IP-XACT
- `incr_cntr_test` – This example demonstrates the SystemRDL capabilities for describing counters.
  -  `counter_example.rdl` – the input SystemRDL
  -  `counter_example.xml` – the output IP-XACT
- `leon2` – This example demonstrates the SystemRDL transformation of the Leon2 IP-XACT example. Please refer to the IP-XACT Examples for more information on the Leon2 example.
- `lock_and_key` – This example demonstrates the SystemRDL capabilities for describing fields which have a software write-enable in another register. In addition to the normal IP-XACT output, this example contains a C file in which register write routines are automatically generated from the IP-XACT description.
  -  `lock_and_key.c` – the output C routines
  -  `lock_and_key.rdl` – the input SystemRDL
  -  `lock_and_key.xml` – the output IP-XACT
- `pci_example` – This example demonstrates the register definitions for a more complex block. It also demonstrates the use of SystemRDL include files.
  -  `pci.rdl` – the input SystemRDL
  -  `pci.xml` – the output IP-XACT
  -  `pci_bar.rdl` – an input SystemRDL include file
  -  `pci_enums.xml` – an input SystemRDL include file
- `sata_achi` – This example demonstrates the register definitions for a more complex block a SATA AHCI Controller. It also demonstrates the use of include files and the perl pre-processor in SystemRDL.
  -  `sata_achi_example.rdl` – the input SystemRDL
  -  `sata_ahci_example.xml` – the output IP-XACT
  -  `sata_constants.rdl` – the constants that needed to compile the `sata_ahci_example.rdl` file.
  -  `sata_achi_example.ppp.rdl` – the example after the Perl pre processor has completed executed. Parameters have been resolved.
- Grammar – The ANTLR Grammar for SystemRDL
  -  `SystemRDL.g` - The ANTLR 2.6 Grammar for SystemRDL
  -  `SystemRDLLexer.html` – An HTML representation of the lexer

---

 SystemRDLParser.html – An HTML representation of the parser

### 3.1.1 Documents

The Docs directory contains the SystemRDL language standard, which includes precise definitions for both syntax and semantics for the SystemRDL language.

### 3.1.2 Examples

This directory contains a number of sub-directories containing examples of the use of various features of SystemRDL and the translation from those features to IP-XACT using the proposed mappings. Every sub-directory contains one or more .rdl files and a corresponding .xml file which is the proposed translation to IP-XACT.

### 3.1.3 Grammar

This directory contains the ANTLR 2.6 grammar for the SystemRDL language as well as two html versions describing the lexer and the parser for SystemRDL.

## 4 KNOWN PROBLEMS AND SOLUTIONS

None.

### 4.1 Feedback

Comments and issues can be filed in the SPIRIT Consortium Web site's issues tracker under the project 'SystemRDL Feedback'. The link to the site is:  
[http://www.spiritconsortium.org/mantis/my\\_view\\_page.php](http://www.spiritconsortium.org/mantis/my_view_page.php) Once there, in the selection box for 'project', choose the 'SystemRDL feedback' project. Click on 'report issue.' In the selection box for 'product version' choose "SystemRDL 1.0" release
